

smartCARE

Empowering Cancer Survivors in Europe

smartCARE is a flagship initiative in Europe's Beating Cancer Plan, under the EU4Health Programme 2021-2027.

The project is developing a Cancer Survivor Smart Card – in the form of **a mobile app** – to improve the health and well-being of cancer survivors and patients throughout Europe.

Core impacts

Survivors, patients and caregivers needs, perspectives, and individual experiences

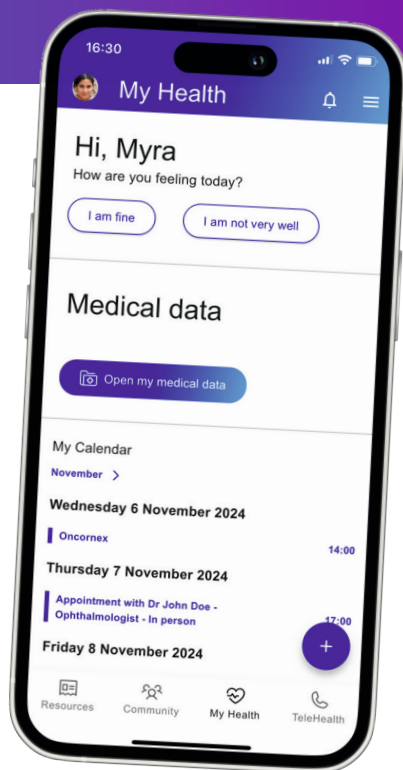

Opportunities for patients and survivors to self-manage their care

Enhancement of patient-clinician-nursing relationships

smartCARE is a united effort to help countries in Europe meet the challenge of cancer survivors and patients and to support former patients moving on with their lives.

« The smartCARE project has the power to transform cancer care delivery and improve patient outcomes like never before. By leveraging digital technologies and innovation, we can create a patient-centred, integrated, and sustainable survivorship ecosystem that meets the needs of European patients and their families. »

Csaba Dégi, President of the European Cancer Organisation and Co-Chair of the smartCARE Steering Committee

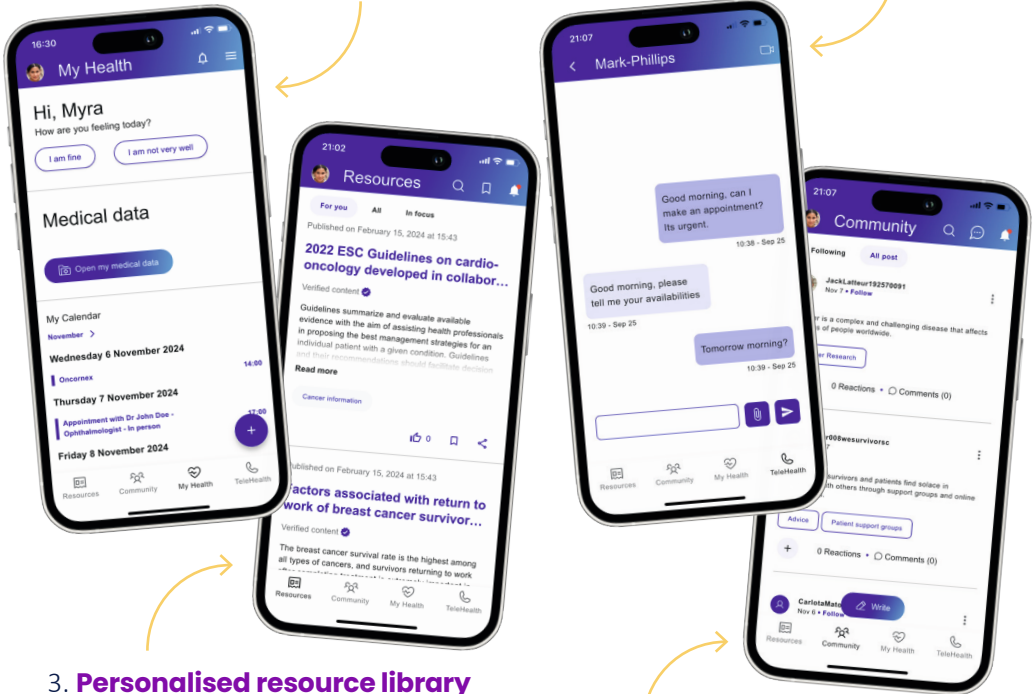

The app is designed to have four main modules:

1. Storing of health data

(i.e. tracking of medical events, symptoms & medications) to be used in consultations with physicians and across borders.

2. Telehealth

to allow long-distance communication between users and healthcare professionals.

3. Personalised resource library

that suggests validated resources to users (i.e. news, podcasts, videos, guidelines) based on their preferences and behaviour.

4. Community

interaction to share experiences and find support.

The **smartCARE** project focuses on survivors, patients and caregivers through fact-finding workshops and the input of the European Cancer Organisation's Patient Advisory Committee.
